

Mr. Suresh Jungari: Assistant Professor

Research area: Maternal and child health, Demography, Tribal health, women health biostatistics and Gender issues in health

I am currently working on the issues of male involvement and support in maternal health among the tribal population of the Gadchiroli district in Maharashtra. The gender role attitudes have great role in having support of male partner to women during pregnancy and child birth. My study deals with the men's understanding of pregnancy related complications, maternal health services awareness among tribal men. Also I am working on premature menopausal issues among Indian women.
